

SECTION A: READING AND VOCABULARY [30 MARKS]**PART 1: MIND MAPPING (10 Marks)**

Instructions: Read the passage below carefully and complete the mind map. Write your answers in the answer table on page 4 following the mind map.

The “Fairy Tale” Energy Island

- 1 This is a fairy tale, but a true one. The setting is an island in central Denmark 1
called Samsø. It is a tidy farming community where people listen to each other and
try to get along. It is a charming place, one that could be described as a land far away
in one of Hans Christian Andersen’s storybooks, but doing so would miss the point.
Samsø is not all that distant or magical. It is a lot like any other place. 5
- 2 People here believe they can change destiny, and they have done it. The hero 5
of our tale: Søren Hermansen. He helped convince this tiny island, years ago, that it
could do the impossible – that it could get rid of fossil fuels, and, in doing so, energise
the local economy and help with climate change.
- 3 World leaders and diplomats have repeatedly convened for UN climate talks 10
with the goal to figure out how to eliminate the use of fossil fuels by 2050 and avoid
2 degrees Celsius of warming. That temperature increase, measured since the
Industrial Revolution, would likely wipe low-lying island countries off the map,
intensify droughts, push countless species towards extinction and supercharge deadly
heat waves. We do not want to cross that line, or even approach it. Delegates of the 15
UN Summits are asking big questions: Is it possible to move away from fossil fuels
and towards a cleaner energy system? What will it cost? How long will it take?
- 4 In 1997, the residents of Samsø responded to a challenge: The federal 20
government asked communities to compete for the title of the country’s first town
powered 100 per cent by renewable energy. Samsø won the bid with their impressive
proposals and achieved that goal. It did not get any special help to do it. Aside from
some technical consulting, the island only had access to energy subsidies and other
assistance that would be available to any Danish locale.
- 5 How did they do it? Hermansen, 56, told me that there was no special sauce, 25
really. “It was hundreds of meetings,” he said. Hermansen was among those pushing
this transition, but it was important to him and others that everyone in the community
had a say. He was fond of saying that the island turned the “NIMBY” attitude (“Not
in My Backyard”) into “YIMBY” (“Yes in My Backyard”).
- 6 After winning the contest, the approximately 4,000 residents, as well as private 30
investors and the municipality, pooled their money, resulting in a total of \$80 million
in credit in the first 10 years. According to Hermansen, the money was used to buy
21 large wind turbines that generate power from offshore. They also invested in a
centralised heating system powered partly by leftover straw from farms. Not
everyone invested, and they did not do so equally. However, each investor,
Hermansen said, has an equal say in the administration of the project. 35
- 7 It worked. Samsø now says it is powered by 100 per cent renewable energy 40
and is “carbon neutral.” There are still some gas-powered cars and tractors on the
island, so it has not replaced fossil fuels completely, but it plans to achieve it by 2030.
However, it does produce more energy from renewable sources than it can use, and
it sells wind power to the rest of Denmark. On September 1, according to Gitte
Agersbæk, an engineer at Energinet, which helps manage the power grid, the country
made so much wind power that it covered all its energy needs for that day. Coal

Continued...

power plants were temporarily shut down, and the excess clean energy was sold to nearby countries like Germany.

8 “It is not the windmills that make it interesting,” Hermansen said. “It is the 45
story: the little community that did good, turned green, and realised something.
People here are not necessarily on a save-the-world bent, necessarily. We do not
wake up in the morning and say, ‘How do we save the polar bear?’” Hermansen said.
They are trying to live better lives, to make smart investments, and to create jobs.
Tranberg, a farmer, for example, invested a sizable sum of his money on wind 50
turbines. He has made it back and more, using the extra money to build an energy-
efficient house with geothermal heat, solar energy, and thick insulation in the walls.

9 However, Samsø is not a paradise. Some locals are concerned about the lack
of work, and that young people are leaving. The island has a relatively low average
disposable income compared to other municipalities in Denmark. In reality, the 55
energy transition has not been flawless either. The price of wind electricity has
dropped considerably in recent years, and some locals grouch about that, since they
sell excess clean power to the mainland. Some wind turbines have needed expensive
repairs. Moreover, others say the island still has a long way to go if it wants all its
cars and homes to be fully electrified and heated without any fossil fuels. 60

10 Nevertheless, Samsø, as a community, will find ways to overcome the
challenges that they are facing. The world needs this cooperative attitude now more
than ever to promote cleaner energies. Samsø has been able to thrive on clean energy
despite some flaws in its energy transition. Denmark subsidises clean energy and
puts a price on carbon pollution to help create a market that will support cleaner 65
energies. The government also helps communities get loans for clean energy and
creates economic incentives not to pollute. There is no reason these policies cannot
be replicated elsewhere, especially in high-polluting countries like the United States
and China, which are doing more to cause global warming than anyone. “People in
Denmark think it makes a difference whether you do something or not. You are not 70
sitting passively waiting for somebody else, or for the politicians, to do it. That is
something that hopefully could inspire others,” said Connie Hedegaard, former EU
commissioner for climate action.

11 Other communities should be having clean-energy discussions, and they need
to act fast. We do not have to wait for world leaders. We do not have time to wait for 75
them, with the fate of low-lying islands, Arctic communities, and millions of the
world’s poor hanging in the balance of climate change. “You have to go through a
hell of a lot of trouble before you get the princess, but fairy tales, of course, do not
happen unless we make them come true,” Hermansen said.

The "Fairy Tale" Energy Island

1. _____

- held hundreds of meetings

2. _____

- received some technical consulting
- accessed some energy subsidies and other assistance available to Danish locales

3. _____

4. _____

- purchased 21 large wind turbines to generate power from offshore
- invested in a centralised heating system powered by leftover straw from farms

5. _____

- Produced a surplus of wind power on September 1 that power plants were temporarily shut down, and excess clean energy was sold to neighbouring countries like Germany.

6. _____

7. _____

- The costly repairs of some wind turbines

8. _____

The government policies that enable Samsø to continue using cleaner energies

9. _____

10. _____

PART 2: VOCABULARY AND COMPREHENSION (20 Marks)

Instructions: Read the passage below carefully and answer **ALL** the questions that follow in the spaces provided.

The Epidemic of Inattention

- 1 Seemingly everyone is concerned about concentration these days. Margaret Sibley, a professor of psychiatry and behavioural sciences at the University of Washington School of Medicine, specialises in working with adolescents and adults who have attention-deficit hyperactivity disorder (ADHD), and Sibley says recently, she and her colleagues have been “inundated” with clients who do not actually have ADHD; they are just worried they do. It is hard to blame them for worrying. ADHD diagnostic rates are on the rise in many countries; regular posts on TikTok and other social media platforms, as well as the growing body of research, have convinced even more people that they have attention issues. Even among people who have not sought medical care, there seems to be a sense that focusing is getting harder. 10
- 2 Adam Brown, co-director of the Centre for Attention, Learning, and Memory at St. Bonaventure University in New York, says there is good reason for concern; in his view, inattention has reached “epidemic” levels. However, there is good news too, he says. It is an epidemic we have the power to reverse. “I don’t believe there is a significant neurological change that is causing people to have shorter attention spans,” Brown says. “It’s the environment we live in. It’s the phones.” 15
- 3 Distractibility is nothing new. Focus naturally waxes and wanes depending on a range of factors, from how much sleep someone got the night before to how interested they are in the task at hand. Nevertheless, the strong “cocktail” of anxieties inherent to modern life can make for a particularly potent drain on attention, Sibley says. In modern life, Sibley says, we are essentially living in a room filled with powerful distractions to vie for our attention all the time, thanks to the competing demands of work and home life, societal stressors like the pandemic, and the constant temptation of phones, social media, and the Internet. 20
- 4 Screens present a unique minefield of distractibility, with their constant flow of notifications and information, and that is by design, says Gloria Mark, a professor of informatics at the University of California, Irvine. At its core, the Internet was designed to capitalise on how humans think, Mark says, so it is little surprise that people are drawn to it. “It’s not just the fact that there are algorithms catching our attention, we have this sense that we have to respond, we have to check; human brains want novelty, excitement, and social connection, and devices play into those desires,” Mark says. 30
- 5 Checking a notification flashing across your screen can provide a small hit of dopamine, creating a sense of reward that keeps you coming back for more. When you give in to temptation by pausing a task to check your phone, your brain also has to switch gears to stop what it was previously doing and move to a new task, Brown says. This process negatively affects the overall speed and quality of your work in the short term, research suggests, and in the long term, “The more you engage in task switching, the more your brain wants to wander and look for that new thing,” Brown says. In other words, your brain gets used to constant diversions and engages in them out of habit. 40

Continued...

- 6 Indeed, Mark's research suggests that we are giving into digital temptation more and more. In the early 2000s, she and her team tracked people while they used an electronic device and noted each time their focus shifted to something new, roughly every 2.5 minutes on average, but in recent repeats of that experiment, the average has gone down to about 47 seconds. 45
- 7 Nevertheless, it is hard to objectively nail down how long someone's attention span really is and how it is changing over time. This is because even diagnostic criteria for ADHD—significant and chronic attention issues that interfere with someone's daily life—are somewhat subjective. One 2016 journal article questioned widely held assumptions about attention, such as that students can only focus on a lecture for 10 to 15 minutes. After reviewing the literature, author Neil Bradbury, a professor at the Rosalind Franklin University of Medicine and Science in Illinois, found few studies that objectively demonstrated students had a finite ability to focus. Many studies use behaviours, such as note-taking or fidgeting, as proxies for attention, Bradbury says, but behaviour is not necessarily the same as focus itself. "There really is not a good definition of what attention means," Bradbury says. "Unless you have a good definition that everybody agrees on, it is really hard to come up with a measurement of that, because you really don't know what you are measuring." In many cases, Bradbury says, students' ability to pay attention seems to depend on how interesting they find the material they are learning and how well it is presented, which makes measuring their inherent attention spans difficult. 50 55 60
- 8 For people with serious, chronic focus problems, modifications to improve focus might include working with a mental-health clinician and/or taking medication. However, most people who experience occasional concentration issues can make tweaks on their own. In Brown's opinion, there is one adjustment that is more important than any other. "Remove the device," he says. Turning your phone facedown is not always enough; research suggests that simply having a phone within eyesight can make it harder to focus, and the buzz of a single notification can ruin concentration. It is also important to learn how to be around screens without letting them derail your concentration, a process that Brown says largely comes down to muscle memory. Just as you get used to constantly checking your phone, you can build a habit of not looking at it all the time, Brown says. "When your phone goes off, you want to look at it," he says. "But over the course of weeks and months, if you deliberately ignore it, you will get better at focus." 65 70 75
- 9 It is also important to assess your priorities and focus your energy on a task, rather than trying to split your limited time and attention in a million directions, Sibley says. That might mean dropping non-crucial commitments in pursuit of being fully present for the ones that really matter to you, she says. "Attention is goal-directed," Mark agrees. Her research has shown that people are better at staying on task if they are regularly reminded of what they want to achieve. Mark also recommends visualising what you want your short-term future to look like and using that as motivation in the present moment. If you can clearly imagine how good it would feel to finish work at 5 p.m., you may be more inclined to power through your afternoon energy slump. "If we know what's happening, we can take measures to enhance our attention and memory for our future lives," Brown says. 80 85

Question 1: Extending and Developing Vocabulary in Context (5 Marks)**Instructions:** Find a word in the passage for each of the meanings below.

Meaning	Paragraph	Answer
a. having a strong and powerful effect on something	3	_____
b. to divert or switch our focus to other things	5	_____
c. done in a way that presents only facts without the influence of opinions or feelings	7	_____
d. small or minor adjustments	8	_____
e. more likely to do something	9	_____

Question 2: Affixes (5 Marks)**Instructions:** Fill in the blank in each question below with an appropriate word by adding a suitable prefix or suffix or by adding both prefix and suffix to the word provided.

Example	Answer
0. regular (line 7) It is wise to consult a cardiologist when our heart is beating so a stress test can be carried out to ascertain the cause of the irregularity.	irregularly _____
a. reverse (line 14) Smokers ought to quit smoking as it causes damage to their bodies especially their lungs.	_____
b. constant (line 40) Parents must check on their children's whereabouts and activities so that they will be safe and be kept away from mischief.	_____
c. finite (line 54) There is no end to the study of botany, as our planet is filled with an number of plant species.	_____
d. assess (line 76) Before the insurance payout could be determined, an had to examine the severity of the fire damage to the property.	_____
e. power (line 84) Developing digital literacy skills can younger users to protect themselves as they navigate through the hazardous cyberworld.	_____

Continued...

Question 3: Comprehension (10 Marks)**Instructions:** Answer **ALL** questions.

- a. What has contributed to the increased number of people who worry that they might be suffering from ADHD? (2 marks)

- b. What can you infer from this statement “At its core, the Internet was designed to capitalise on how humans think” (lines 27-28). Use a statement from the passage to confirm your inference. (2 marks)

- c. State if the statements below are **true** or **false**. Justify your answers using information from the passage.

- i. Dopamine plays a part in compelling us to check our phones for notifications continuously. (1 mark)

- ii. Behaviours such as note-taking and fidgeting are good determiners of a person’s level of attention. (1 mark)

Continued...

d. State if the sentences below are a **fact** or an **opinion**. Justify your answers.

- i. In the early 2000s, she and her team tracked people while they used an electronic device and noted each time their focus shifted to something new, roughly every 2.5 minutes on average, but in recent repeats of that experiment, the average has gone down to about 47 seconds. (1 mark)

- ii. If you can clearly imagine how good it would feel to finish work at 5 p.m., you may be more inclined to power through your afternoon energy slump. (1 mark)

e. How does muscle memory help in preventing screens from distracting us? (2 marks)

SECTION B: GRAMMAR [20 MARKS]**PART 1: ERROR IDENTIFICATION (10 Marks)**

Instructions: For questions 1-10, identify the underlined option that is **INCORRECT** in the following aspects: run-on sentence, sentence fragment or faulty parallelism. Write your answers (A, B, C or D) in the answer table provided at the end of the page.

1. Multimedia University, a^Aleading institution in^Bhigher education, offers many majors in engineering.^C Such as electronic, mechanical, intelligent robotics, electrical, and telecommunications engineering.^D

2. I struggled to decide the discipline to study in university I was confused^A with so many choices, but after thorough research and consideration, I was captivated by the array of engineering options offered at Multimedia University.^B^C^D

3. The football coach, Frank Bern Knock, exhibited unprofessional behaviour during a crucial moment in the game by abruptly walking off the field, leaving his team without guidance and support. Just when they needed him the most.^A^B^C^D

4. My older brother, an accomplished musician, was supportive, energetic, and an inspiration. His passion for music fuelled my own enthusiasm and encouraged me to pursue my musical interests.^A^B^C^D

5. The politician's son went scot-free in the highly publicised hit-and-run case. Because there is often a stark contrast between the treatment of the wealthy and the less privileged when it comes to the law.^A^B^C^D

Continued...

6. The government presented a white paper in Parliament about black money, which outlined
A
a strategy to stop the generation of illegal money the proposal aimed to address the issue
B C
and promote transparency in financial transactions.
D
7. Providing electricity to all villages by the end of 2023, creating jobs to reduce migration
A B
from the hills, and to put an end to illegal logging are top priorities for the unity
C D
government.
8. Having a healthy life involves maintaining a balanced and nutritious diet, engaging in
A
regular moderate exercise to keep the body active and fit, as well as ensuring an adequate
B C
amount of sleep. For proper rest and rejuvenation.
D
9. Owning a pet has proven to be extremely beneficial to people's health. Pets help reduce
A B
stress, providing companionship, contribute to enhanced immunity and alleviate
C D
anxiety.
10. In your daily life, you can practice looking at things from different angles to get better at
A
solving problems and communicating with others this technique involves seeing things
B C
differently, either by physically changing your position or by thinking about them in a new
D
way.

PART 2: ERROR CORRECTION (10 Marks)

Instructions: For questions 11-20, identify the options that are **CORRECT** and free from the following aspects: run-on sentence, sentence fragment, or faulty parallelism. Write your answers (A, B, C or D) in the answer table provided at the end of the page.

11. Choose the option which is **free of sentence fragment**.

- A. If there is one thing that reliably gathers a large group of people, it is an enormous eight-foot-tall flower that emits the scent of a rotting corpse. Referred to as the corpse flower or the titan arum. These rare plants only bloom for a few fleeting days. With several years passing between each magnificent blossom.
- B. If there is one thing that reliably gathers a large group of people. It is an enormous eight-foot-tall flower that emits the scent of a rotting corpse. Referred to as the corpse flower or the titan arum. These rare plants only bloom for a few fleeting days, with several years passing between each magnificent blossom.
- C. If there is one thing that reliably gathers a large group of people, it is an enormous eight-foot-tall flower that emits the scent of a rotting corpse. Referred to as the corpse flower or the titan arum, these rare plants only bloom for a few fleeting days, with several years passing between each magnificent blossom.
- D. If there is one thing that reliably gathers a large group of people, it is an enormous eight-foot-tall flower that emits the scent of a rotting corpse. Referred to as the corpse flower or the titan arum, these rare plants only bloom for a few fleeting days. With several years passing between each magnificent blossom.

12. Choose the option which is **free of run on sentences**.

- A. In the past few years, there has been a surge in news articles highlighting the potential threat of robots replacing human workers. With the rise in user-friendly generative AI tools like ChatGPT, some individuals have expressed growing concerns about their prospects and whether their current skills will remain valuable in the evolving job market this has led to a sense of anxiety among certain workers regarding their career paths.
- B. In the past few years, there has been a surge in news articles highlighting the potential threat of robots replacing human workers. With the rise in user-friendly generative AI tools like ChatGPT, some individuals have expressed growing concerns about their prospects and whether their current skills will remain valuable in the evolving job market. This has led to a sense of anxiety among certain workers regarding their career paths.
- C. In the past few years, there has been a surge in news articles highlighting the potential threat of robots replacing human workers, with the rise in user-friendly generative AI tools like ChatGPT, some individuals have expressed growing concerns about their

prospects and whether their current skills will remain valuable in the evolving job market. This has led to a sense of anxiety among certain workers regarding their career paths.

- D. In the past few years, there has been a surge in news articles highlighting the potential threat of robots replacing human workers with the rise in user-friendly generative AI tools like ChatGPT, some individuals have expressed growing concerns about their prospects and whether their current skills will remain valuable in the evolving job market this has led to a sense of anxiety among certain workers regarding their career paths.

13. Choose the option which is **free of faulty parallelism**.

- A. Drawing during the pandemic provides a creative outlet that promotes mental well-being, reducing feelings of isolation, and allows for productive use of time indoors. Additionally, sharing artwork online fosters a sense of connection and encouraging collaboration among artists and art enthusiasts.
- B. Drawing during the pandemic provides a creative outlet that promotes mental well-being, reduces feelings of isolation, and allowing for productive use of time indoors. Additionally, sharing artwork online fosters a sense of connection and to encourage collaboration among artists and people who love art.
- C. Drawing during the pandemic provides a creative outlet that promotes mental well-being, reduces feelings of isolation, and allows for productive use of time indoors. Additionally, sharing artwork online fosters a sense of connection and encourages collaboration among artists and art enthusiasts.
- D. Drawing during the pandemic provides a creative outlet that promotes mental well-being, reduces feelings of isolation, and allowing for productive use of time indoors. Additionally, sharing artwork online fosters a sense of connection and encourages collaboration among artists and people who love enthusiasts.

14. Choose the option which is **free of sentence fragment**.

- A. Smartwatches might help diagnose Parkinson's disease up to seven years ahead of symptoms, a study suggests. The UK Dementia Research Institute team at Cardiff University used artificial intelligence to analyse data from 103,712 smartwatch wearers. By tracking their speed of movement over a single week between 2013 and 2016. They were able to predict which would go on to develop Parkinson's. It is hoped this could ultimately be used as a screening tool.
- B. Smartwatches might help diagnose Parkinson's disease up to seven years ahead of symptoms. A study suggests. The UK Dementia Research Institute team at Cardiff University used artificial intelligence to analyse data from 103,712 smartwatch wearers. By tracking their speed of movement over a single week, between 2013 and 2016, they were able to predict which would go on to develop Parkinson's. It is hoped this could ultimately be used as a screening tool.

- A. Did you know that your morning coffee includes a dose of fibre? One study found that. On average, coffee has between 1.1 and 1.8 grams of fibre per cup, depending on whether it is filtered, espresso, or instant. That might not sound like much. But it is more fibre than you will find in orange juice. Which has about half a gram of fibre per cup. A cup of tea, on the other hand, typically will not help you meet your daily fibre requirements. Unless you decide to munch on the tea leaves.
- B. Did you know that your morning coffee includes a dose of fibre? 19. Choose the option which is **free of run-ons**.

- A. Language is a dynamic phenomenon, although English has a basic core of words which are fundamental to sentence construction and have remained consistent over centuries, there are also a great number of words which both enter and leave the language as the years go by. Some new words are short-lived, tied to cultural or technical concepts that soon lose significance. Others stay the course, usually because they represent concepts which have become permanent features of society.
- B. Language is a dynamic phenomenon. Although English has a basic core of words which are fundamental to sentence construction and have remained consistent over centuries, there are also a great number of words which both enter and leave the language as the years go by. Some new words are short-lived, tied to cultural or technical concepts that soon lose significance, others stay the course, usually because they represent concepts which have become permanent features of society.
- C. Language is a dynamic phenomenon. Although English has a basic core of words which are fundamental to sentence construction and have remained consistent over centuries, there are also a great number of words which both enter and leave the

language as the years go by. Some new words are short-lived, tied to cultural or technical concepts that soon lose significance. Others stay the course, usually because they represent concepts which have become permanent features of society.

- D. Language is a dynamic phenomenon, although English has a basic core of words which are fundamental to sentence construction and have remained consistent over centuries, there are also a great number of words which both enter and leave the language as the years go by. Some new words are short-lived, tied to cultural or technical concepts that soon lose significance others stay the course, usually because they represent concepts which have become permanent features of society.

20. Choose the option which is **free of faulty parallelism**.

- A. As children grow and develop, they can be easily influenced by what they see and hear, especially from digital media. Digital media includes watching TV, browsing the internet, and smart devices. While some programs can be educational, many children consume excessive amounts of digital media. This exposure can lead them to witness violent content, which should be discouraged. Digital media may also promote poor eating habits through commercials for high-calorie foods and low in nutrients. Excessive screen time can detract from reading, studying, and exercise.
- B. As children grow and develop, they can be easily influenced by what they see and hear, especially from digital media. Digital media includes TV, internet, and smart devices. While some programs can be educational, many children consume excessive amounts of digital media. This exposure can lead them to witness violent content, which should be discouraged. Digital media may also promote poor eating habits through commercials for high-calorie and low-nutrient foods. Excessive screen time can detract from reading, studying, and exercising.
- C. As children grow and develop, they can be easily influenced by what they see and by hearing, especially from digital media. Digital media includes TV, internet, and smart devices. While some programs can be educational, many children consume excessive amounts of digital media. This exposure can lead them to witness violent content, which should be discouraged. Digital media may also promote poor eating habits through commercials for high-calorie and low-nutrient foods. Excessive screen time can detract from reading, studying, and exercising.

Instructions: Write your answers for Part 1 (Questions 1–10) and Part 2 (Questions 11–20) in the table below. Use only the letters A, B, C, or D.

Part 1	Answer	Part 2	Answer
1.		11.	
2.		12.	
3.		13.	
4.		14.	
5.		15.	
6.		16.	
7.		17.	
8.		18.	
9.		19.	
10.		20.
